# Understanding Sampling in Observability

Explore how sampling revolutionizes  
data handling in observability.

# What is Sampling?

Sampling is like taking a snapshot of your data. It helps in managing vast amounts of information more efficiently.

2

## Why Use Sampling?

It keeps observability costs down and helps in quickly identifying trends and anomalies without drowning in data.

3

## Types of Sampling

Common types include random sampling, systematic sampling, and adaptive sampling, each with its own set of benefits.

4

## When to Sample?

Balance is key. Use sampling during high loads or when looking for long-term trends for optimal insights.
